

MEDNETA METHODOLOGY AND DELIVERABLES

MEDNETA employs an integrated methodology with feedback between theory, methods and strategies.

The project methodology is built on existing local networks in order to reach local problems and open up new possibilities to tap on external experience by expanding cross-border synergies. It includes interviews with communities' representatives in order to accurately assess their needs and problems and host participatory workshops with beneficiary groups in each city in order to define strategies and actions that will address their aspirations in their field of interest.
